Bottom fixing

3. Roof element

1. Place the roof element on top of previously installed and fixed wall elements. Check walls for vertical level. Ceiling element must sit flush with walls external layer and with no excessive gaps between internal panels. Fix with screws.
2. Install the ceiling as the previous. Check the front edge between ceiling and wall - they must fit flush.

NOTE! Do not support elements on edge of previous installed element!

4. Glasswall

1. Fit the door to previously installed elements.
2. Check for level.
3. Fix the door with brackets and foam.

NOTE! Do not remove protection material from door until it is finally and properly fitted.

5. Electrical work

1. Before fixing interior loose boards or other panels, do all the necessary electrical work.

NB! ALL ELECTRICAL CONNECTIONS **MUST** BE MADE BY CERTIFIED ELECTRICIAN!

6. Side panels

1. Start assembly from VK-1 to VK-4. Place the panels on previously assembled and stable elements and fix with screws as indicated on Figure 6a.
2. NOTE! There is a small board in PK-4 panel that you have to slide in its place.
3. Fix top panels through board with black screws.

7. Side door for electrical box

1. Place the door in a hole in exterior panels. Fix the door with screws trough hinge.
2. Fixe loose bottom boards with black screws.

Figure 7a.
